Care of your new tattoo:

Remove bandage within two hours. Wash hands, then wash your tattoo with an antibacterial soap using your finger tips. DO NOT use a wash cloth or scrubber! Rinse thoroughly. Pat dry with a clean paper towel. Allow your tattoo to air dry another 20 to 30 minutes or longer if it appears to be oozing or moist. When dry, apply a very small amount of ointment preferably Redemption, Bacitracin, or Hustle Butter for the first 4 to 5 days(or until peeling begins), twice a day, rubbed completely into the skin so that it does not appear slick or slimy. After the first 4 to 5 days, switch to a small amount of fragrance and dye free hand lotion, such as Lubriderm, or use Redemption or Hustle Butter to moisturize your tattoo 5 to 6 times a day or whenever it appears dry. Always wash your hands before applying ointment or lotion!

- **DO NOT** pick, scratch, or peel any loose skin or scabs! They will come off when ready while washing or applying moisturizer.
- **DO NOT** soak your tattoo in pools, ocean, baths, hot tub, etc. Short showers only until completely healed (approximately 2 weeks).
- **NO** direct sunlight until completely healed. Once healed if you cannot prevent exposure to the sun then apply maximum strength sun block (spf 45 or higher) to keep your colors looking bright and new!
- Be aware that during the first few days of healing the tattoo may seep ink, blood or lymph which may stain clothing, sheets or other fabrics.
- For any questions or concerns, feel free to call or stop by.

Thank you!
