SECOND SKIN AFTERCARE INSTRUCTIONS

Leave the Saniderm/Second Skin on for 3 days. It's water resistant, but breathable to promote healing.

- ☛ You will see blood/plasma gathering underneath the surface the first day or so. That is normal and will not affect your tattoo.
- ☛ DO NOT submerge your tattoo underwater. It is NOT waterproof. The Saniderm will typically hold up in a shower, but should NOT be submerged or soaked for at least 2 weeks.
- ☛ If the Saniderm starts leaking, or peeling off, or is compromised in any way, remove it and either begin traditional aftercare (see opposite side), or replace with a new Saniderm. This second Saniderm can be left on up to an additional 3-7 days.

To remove your Saniderm gently peel by pulling slowly outward from the edge, or by rolling the edge under your fingers with soapy water. Do NOT tear the bandage off quickly.

- ☛ You should wash the tattoo with liquid soap once a day for the duration of healing and apply a mild, fragrance-free lotion as needed. Always keep the tattoo clean and dry to the touch.
